

Garware PPF Cap Sheet Provides an Extra Layer of Protection.

Garware Paint Protection Film is manufactured and delivered with a Cap Sheet in place to ensure that the film stays undamaged right up to the time you install it.

Because PPF is softer than traditional window films, it is more susceptible to damage during shipping and storage. So, the Cap Sheet provides an extra layer of protection.

In addition, if you use a plotter to cut patterns, this Cap Sheet makes it easier to see and weed excess film from around the pattern.

When you're ready for installation, the Cap Sheet peels right off and you're set to go!
